

Mathematical Reasoning Trace

Step1: Given $x + y = 10$

DEFINITION

Step2: Given $2x - y = 5$

DEFINITION

Step3: Adding Eq. $3x = 15$

COMPUTATION

Step4: Therefore $x = 5$

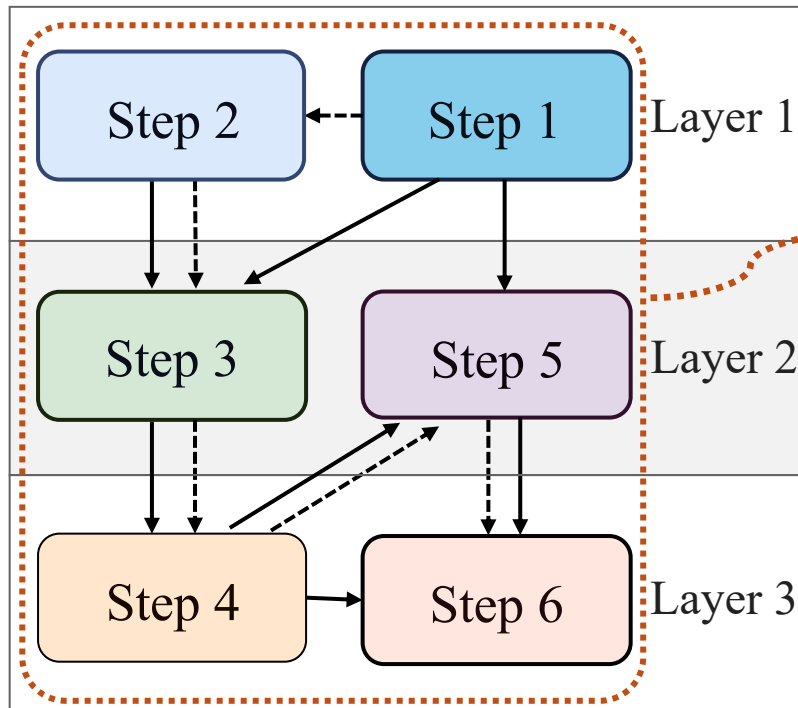

DERIVATION

Step5: Substitute $y = 10 - 5 = 5$

SUBSTITUTION

Step6: Conclude $x = 5, y = 5$

CONCLUSION

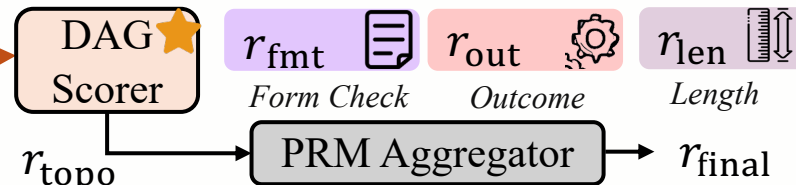

—→ dependency - - - -> sequential

[Acyclic] / Directionally Consistent

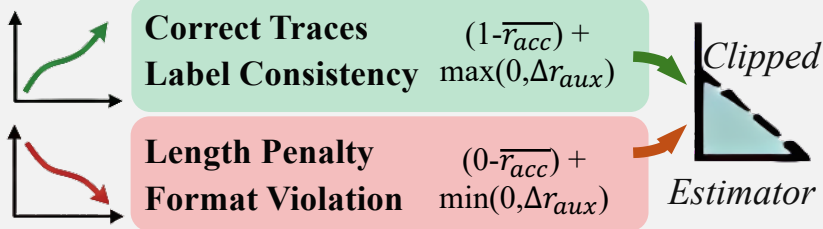

[Connected] / No Orphan Conclusion
